What will the following commands do?

- echo "Hello, World!"

→It will print Hello, World to the console

- name="Productive"

→it will store the String “Productive” in name variable

- touch file.txt

→it will create a file.txt file

- ls -a

→it will display all files including hidden

- rm file.txt

→it will remove file.txt

- cp file1.txt file2.txt

→it will copy the contents of the file1.txt to file2.txt

- mv file.txt /path/to/directory/

→it will move the file.txt to directory directory

- chmod 755 script.sh

→gives full permission to the owner and only read, execute permission to others

- grep "pattern" file.txt

→checks pattern word in file.txt

- kill PID

→ kills a process

- mkdir mydir && cd mydir && touch file.txt && echo "Hello, World!" > file.txt && cat file.txt

→make a directory named ‘mydir’ and jumps into it. In that creates a file named ‘file.txt’ and add contents “Hello, World!” to the file.txt and prints the contents of the file to the console.

- ls -l | grep ".txt"

→list owner information of .txt files

- cat file1.txt file2.txt | sort | uniq

→will display the contents of both files which are unique in sorted way

- ls -l | grep "^d"

→list all the directories

- grep -r "pattern" /path/to/directory/

→ recursively searches for the pattern word in a directory

- cat file1.txt file2.txt | sort | uniq –d

→ will display the contents of both files which are duplicate in sorted way

- chmod 644 file.txt

→The owner can only read and write, and other can only read the file.txt

- cp -r source_directory destination_directory

→it will copy files recursively.

- find /path/to/search -name "*.txt"

→ it will find all the .txt files into the provided path

- chmod u+x file.txt

→it will add permission to the owner to execute the file.txt

- echo $PATH

→it allows to check the current value of PATH variable

Identify True or False:

1. ls is used to list files and directories in a directory.

→True

2. mv is used to move files and directories.

→True

3. cd is used to copy files and directories.

→False, cp is used to copy

4. pwd stands for "print working directory" and displays the current directory.

→True

5. grep is used to search for patterns in files.

→True

6. chmod 755 file.txt gives read, write, and execute permissions to the owner, and read and execute permissions to group and others.

→True

7. mkdir -p directory1/directory2 creates nested directories, creating directory2 inside directory1 if directory1 does not exist.

→True

8. rm -rf file.txt deletes a file forcefully without confirmation.

→True

Identify the Incorrect Commands:

1. chmodx is used to change file permissions.

→chmod is used to change file permissions

2. cpy is used to copy files and directories.

→cp is to copy files and directories

3. mkfile is used to create a new file.

→touch is used to create new files

4. catx is used to concatenate files.

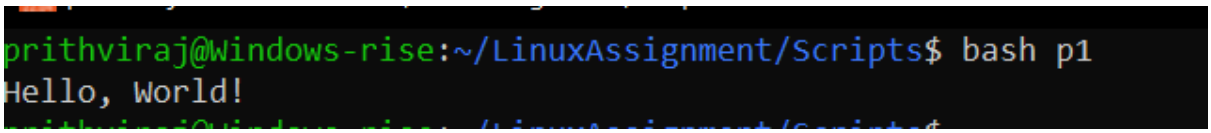
→cat is used to concatenate the files

5. rn is used to rename files.

→mv is used to rename the files

Question 1: Write a shell script that prints "Hello, World!" to the terminal.

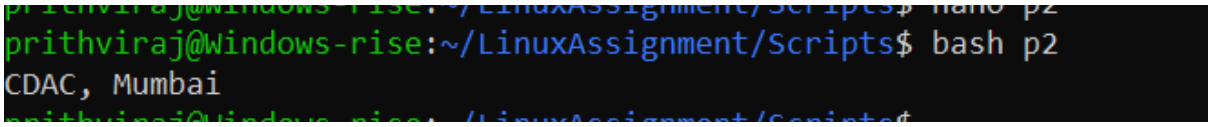
→ echo “Hello, World!”



Question 2: Declare a variable named "name" and assign the value "CDAC Mumbai" to it. Print the value of the variable.

→ name="CDAC, Mumbai"

echo $name

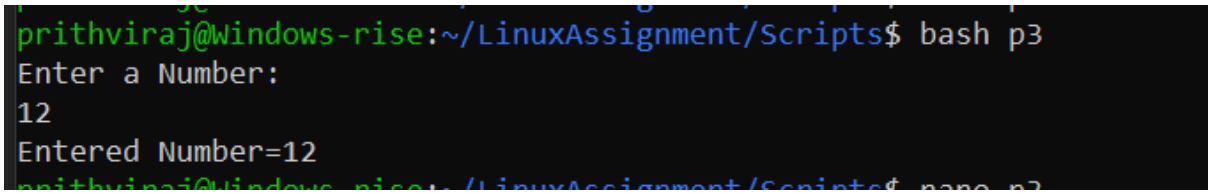


Question 3: Write a shell script that takes a number as input from the user and prints it.

→ echo "Enter a Number:"

read num

echo "Entered Number=$num"

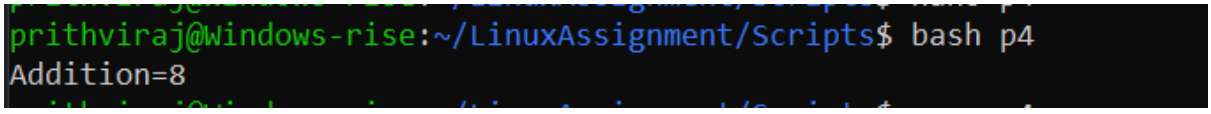


Question 4: Write a shell script that performs addition of two numbers (e.g., 5 and 3) and prints the result.

→ X=5

Y=3

echo "Addition="$(($X+$Y))



Question 5: Write a shell script that takes a number as input and prints "Even" if it is even, otherwise prints "Odd".

→ echo "Enter a Number:"

read num

if [$(($num % 2)) == 0]

then

echo "$num is Even"

else

echo "$num is Odd"

fi

```
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ bash p5
Enter a Number:
34
34 is Even
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ bash p5
Enter a Number:
35
35 is Odd
```

Question 6: Write a shell script that uses a for loop to print numbers from 1 to 5.

→ for ((a=1; a<=5; a++))

do

echo $a

done

```
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ bash p6
1
2
3
4
5
```

Question 7: Write a shell script that uses a while loop to print numbers from 1 to 5.

→ a=1

while [$a -le 5]

do

echo $a

a=$(($a+1))

done

```
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ bash p7
1
2
3
4
5
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ nano p7
```

Question 8: Write a shell script that checks if a file named "file.txt" exists in the current directory. If it does, print "File exists", otherwise, print "File does not exist".

→ if [-f "file.txt"]

then

echo "File Exists"

else

echo "File does not Exist"

fi

```
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ bash p8
File does not Exist
```

```
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ touch file.txt
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ ls
file.txt  p1  p2  p3  p4  p5  p6  p7  p8
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ bash p8
File Exists
```

Question 9: Write a shell script that uses the if statement to check if a number is greater than 10 and prints a message accordingly.

→ echo "Enter a number:"

read num

if [$num -gt 10]

then

echo "$num is greater than 10"

else

echo "$num is less than 10"

fi

```
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ bash p9
Enter a number:
11
11 is greater than 10
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ bash p9
Enter a number:
9
9 is less than 10
```

Question 10: Write a shell script that uses nested for loops to print a multiplication table for numbers from 1 to 5. The output should be formatted nicely, with each row representing a number and each column representing the multiplication result for that number.

→for ((i=1; i<=5; i++))

do

echo "----Table of $i-------"

for ((j=1; j<=10; j++))

do

echo "$i * $j = $(($i*$j))"

done

done

```
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ bash p10
----Table of 1-------
1 * 1 = 1
1 * 2 = 2
1 * 3 = 3
1 * 4 = 4
1 * 5 = 5
1 * 6 = 6
1 * 7 = 7
1 * 8 = 8
1 * 9 = 9
1 * 10 = 10
----Table of 2-------
2 * 1 = 2
2 * 2 = 4
2 * 3 = 6
2 * 4 = 8
2 * 5 = 10
2 * 6 = 12
2 * 7 = 14
2 * 8 = 16
2 * 9 = 18
2 * 10 = 20
----Table of 3-------
3 * 1 = 3
3 * 2 = 6
3 * 3 = 9
3 * 4 = 12
```

Question 11: Write a shell script that uses a while loop to read numbers from the user until the user enters a negative number. For each positive number entered, print its square. Use the break statement to exit the loop when a negative number is entered.

→while [1]

do

echo "Enter a number:"

read num

if (($num < 0))

then

break

else

```
echo "Sqaure of number:"$(($num*$num))
fi
done
```

```
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ bash p11
Enter a number:
-10
prithviraj@Windows-rise:~/LinuxAssignment/Scripts$ bash p11
Enter a number:
10
Sqaure of number:100
Enter a number:
20
Sqaure of number:400
Enter a number:
3
Sqaure of number:9
Enter a number:
-5
```
